

How the rover finds its way

A spinning laser draws a map of the room, and off-the-shelf navigation software plans a route across it and drives the wheels along it.

Jetson Orin Nano · ROS 2 Jazzy
all of it runs on the rover itself

What the rover has seen

As it drives it photographs what is around it and works out where each thing is — without ever needing a word for what the thing is.

Jetson Orin Nano

the models run on the rover's own GPU
